

MAY ALLISON

AGAIN TODAY Everybody's Favorite May Allison

—in— "THE WALK-OFFS"

A satire of high social life, of the follies and foibles of the rich.

In which a woman struggles to find her nobler self amid the alluring vices of the smart set.

A bright comedy of society embroidered with the tracery of delicate love.

The glamorous allure of fashionable society broken into a thousand fragments in the pitiless crystal of a true Kentuckian's manhood.

UTAH Theatre

"LET'S QUIT KNOCKING AND GET BUSY," GEORGE SHORTEN, SANITARY INSPECTOR SAYS IN COMMUNICATION

Mr. Editor: After arriving home from a strenuous day's work I picked up my old friend, The Standard, and, making myself comfortable before a cheerful fire, I opened its pages and found a very large special edition. I eagerly perused its pages and was delighted to read of the progress made in our city and the very many important improvements and developments in industries anticipated in the near future. Mr. Editor, I congratulate you on your enterprising. It was a splendid piece of work and will be read by many people outside of Ogden.

While attending a convention of the food inspectors in Washington last September I was hungry for news from home and I went to the congressional library to find some Utah papers and you can imagine my delight when I found our own local paper, The Standard, on the files. I mention this that you may know that your paper reaches outside of Ogden, in fact, from one end of the continent to the other. Now, good, faithful service, bring it about. Good luck to them! The spirit of progress expressed by them is very commendable.

I also read the statement of Commissioner Ward regarding the police, fire and health departments. There is need for personal supervision by a doctor with special training for municipal sanitation and health, etc., etc., etc.

Now, Mr. Editor, I desire to place before the good people of this city and outside thereof, some things the health department has done during the past twelve years that I have been honored with the position I now hold.

Mr. Ward states, "There is great need for modern methods to be employed in the health department. This department is as important a department as there is in city affairs. There is need for personal supervision by a doctor with special training for municipal sanitation and health, etc., etc., etc."

In this regard permit me to briefly review the past record of this department.

I have held appointments as sanitary inspector, which embraces the health, weights and measures, milk, dairy and food, and vital statistics departments, under the direction of five mayors, the mayor being the head of the health department as prescribed by law, and four city physicians, and my acquaintance, officially, with them was of the most pleasant nature and I count them among my many friends. During their administrations we have grappled with many propositions regarding health and sanitation and while we may have differed in some things, we have parted our official lives with the very best of personal estimation and regard for each other.

Board of Health. With the co-operation given the department by the former commissioners we have accomplished something worth while.

You know, Mr. Editor, that the state laws created a board of health with the mayor as head of the department and the city physician as executive officer, city recorder as ex-officio clerk, with the sanitary inspector, they constitute the board of health. The board was created for the purpose of conducting the affairs of the health department and all matters should be submitted to the board and record made of its findings and disposition by the city recorder.

Some things we have accomplished I call your attention to. Through the diligent efforts of Dr.

Walter E. Whalen and your humble servant the splendid condition of the water supply we now have was brought about by Mayor Fell and his associates. The ordinance covering the duties and powers of the board of health were put into force; the passage of dairy and food laws, the weights and measures ordinance and many other important features in our municipal health work was started.

Later on when Dr. Whalen answered the call of his country, after six years' service with the city, Dr. Kanzler took charge of the work and was inaugurating some important measures for the welfare of the city when he was called into the service and Dr. W. R. Brown was appointed to succeed him. His work has been exceptionally good. His labors during the epidemic that we passed through in 1918 and 1919 stand before the good people of Ogden today.

Garbage Ordinance. Last year we passed a garbage ordinance and have been trying to operate it, but owing to lack of funds we were unable to do all we wanted to do.

Regarding the milk testing, today, I want to say that Ogden city is receiving one hundred per cent milk and that the dairymen are a first class lot of citizens and have expressed themselves as willing to comply with the laws regarding this important industry. Milk, cream and ice cream tests have been made regularly and are on record.

Our merchants are a class of men that we may well be proud of. Their merchandise is of the best and they give the people excellent service and comply with sanitary regulations willingly. Very few violations being reported that are not promptly remedied.

The meat inspection division, added to this department in March, 1918, under the able supervision of Dr. A. J. Webb, has accomplished excellent results, both in securing for the people inspection of the local markets and slaughter houses, not heretofore under local inspection and regulation.

Health Conditions. Now, referring to health conditions: We have passed through some trying times, but have come out with the experience that will fit the department for more efficient work in the future. Some things we have done: In the Clean City contest that was started by the state board of health, Ogden city won the first and second prizes. The drinking fountain on Washington avenue and Twenty-fifth street was won by the city for the best score made in the "clean-up campaign."

We also won first, second and third prizes at the state fair for clean, wholesome milk. We won the first and third prizes in the fly-killing campaign. Our death rate was third of any city in the United States. Our health record has been complimented upon by experts as most excellent.

Our vital statistics are up to date and have been indexed as far back as 1899 and we have been complimented upon this important work.

We co-operate with the federal and state departments in all their work and stand A-1 in all the offices in Washington.

Now, Mr. Editor, let's quit knocking and get busy. We have today the following things to be proud of: One of the cleanest cities in the

United States. The best water supply. The most progressive lot of citizens. The healthiest lot of people. The ideal location for happy homes and healthful people. The best schools in the country. The prospects of a big city, inhabited by loyal American citizens, whose desires are to advance along all lines. Let's be consistent and work for Ogden.

Now, Mr. Editor, if our city fathers can increase the appropriation and give the health department all the money they ask for, we can have an efficient health department, but until the revenue of the city is increased by further taxation we shall have to do the best we can.

Thanking you for your co-operation in the past,
GEORGE SHORTEN,
Sanitary and Health Inspector.

Students of the Weber Normal college will be given a demonstration in the use of the wireless telephone by forest service officials. Telephone Engineer R. B. Adams will deliver a lecture regarding the phones and will illustrate his talk with colored lantern slides.

Wireless phone sets from forests in Idaho will be in Ogden for the demonstration. The demonstration will be held in the auditorium at the Weber Normal college.
